

ReactJS Student Practice Projects (GitHub + LinkedIn)

Beginner React Projects

1. Expense Tracker

- Add/edit/delete expenses
- Categories and filters
- Monthly spending summary
- LocalStorage
- Skills: `useState`, `useEffect`, forms, reusable components

2. Task Management App

- Create, update, delete tasks
- Todo / In Progress / Completed
- Search and filtering
- Drag & drop
- Skills: component architecture, state management

3. Movie Search App

- Search movies through an API
- Movie details page
- Favorites
- Loading/error states
- Skills: API integration, React Router

4. Weather Dashboard

- Search cities
- Current weather + forecast
- Recent searches
- Responsive UI
- Skills: API calls, async operations, conditional rendering

5. Quiz Application

- Multiple-choice questions
- Timer
- Score calculation
- Results screen
- Restart functionality

□ Intermediate Projects — Better for GitHub/LinkedIn

6. E-Commerce Store

- Product listing
- Product details
- Search/filter/sort
- Shopping cart
- Checkout UI
- Authentication

- Skills: React Router, Context/Redux, API integration
- 7. **Admin Dashboard**
 - Sidebar/navigation
 - Users table
 - Search/filter/pagination
 - Charts
 - Dashboard statistics
 - Dark/light mode
 - Skills: reusable components, charts, responsive design
- 8. **Job Portal**
 - Job listings
 - Search by technology/location
 - Job details
 - Apply form
 - Saved jobs
 - Candidate dashboard
 - Skills: routing, forms, API integration, state management
- 9. **GitHub Profile Analyzer**
 - Enter a GitHub username
 - Display repositories
 - Followers/following
 - Languages used
 - Repository statistics
 - Skills: REST APIs, data visualization, error handling
- 10. **Learning Management System (LMS)**
 - Courses
 - Lessons
 - Student dashboard
 - Progress tracking
 - Video lesson UI
 - Quiz system
 - Skills: complex state, routing, authentication

● **Advanced / Portfolio-Level Projects**

11. **Project Management Tool — Trello/Jira Clone**

- Workspaces
- Projects
- Kanban boards
- Drag & drop tasks
- Comments
- Task assignments

- Due dates
- Authentication
- Skills: advanced state management, component architecture, real-world UX

12. Real-Time Chat Application

- Login/signup
- One-to-one messaging
- Group chats
- Online/offline status
- Typing indicator
- Message timestamps
- Skills: React + backend + WebSockets/Firebase

13. Social Media Dashboard

- User profiles
- Posts
- Likes/comments
- Follow/unfollow
- Notifications
- Infinite scrolling
- Skills: full-stack thinking, API design, authentication

14. AI-Powered SaaS Dashboard

- Authentication
- Dashboard
- AI text generation
- History
- Usage limits
- Subscription UI
- Settings
- Skills: React, APIs, authentication, SaaS architecture

15. Full-Stack E-Commerce Platform

- Customer frontend
- Authentication
- Product management
- Cart
- Orders
- Payment integration
- Admin dashboard
- Database/backend
- Skills: production-style application development

If the goal is specifically getting a job

I would NOT recommend making 10 small projects. Instead, make **4 strong projects**:

Project	Difficulty	Professional Value
Expense Tracker	Beginner	React fundamentals
E-Commerce Store	Intermediate	API + state management
Admin Dashboard	Intermediate	Business UI + data
Jira/Trello Clone	Advanced	Real-world architecture
